

November 5, 2018

Dear Valued Customer,

Lyle Industries received notification this week that the following Kollmorgen components are now obsolete and will soon become unavailable to purchase for replacements on your machines:

2 Axis Standalone G&L Controller (Lyle part number 52006330)

4 Axis Standalone G&L Controller (Lyle part number 52006340)

MMC for PC Card (Lyle part number 50882010)

MMC 4 Axis Analog Servo Interface (Lyle part number 50882030)

We have had discussions with our supplier and they agreed to provide a short window of opportunity for you to order replacements. We encourage you to take advantage of this product extension and order replacements for your equipment by December 5, 2018. Once December 5th has past, these items will not be available to purchase.

Replacing these components is a temporary solution for your equipment. Once the supply is exhausted, used components will be the only available replacements. To insure that your machines stay running with readily available components, please contact our kits department for a Mitsubishi controls upgrade. The normal lead time for this upgrade is 16 to 20 weeks. This will guarantee that all components are available and you will not risk exposure of a long downtime.

If you have any questions regarding this bulletin, please contact the Lyle Parts Department at 989-435-7741 extension 2248.

Best Regards,

Lyle Spare Parts
